

# Translation in the hands of many

## Centering Lay Users in Machine Translation Interactions

B. Savoldi, A. Ramponi, M. Negri, L. , Bentivogli

# Position

*The success of technology hinges on its ability to serve users*

- MT cornerstone application, with wide adoption
- Yet, research on lay users and their interactions with the technology remains limited

**MT** is a global tool, with **LLMs** now powering multilingual needs and **users** concerns have increased

## Trends of interest in the ACL anthology

# An temporal outlook and shift

- Historical prevalence of real-world applications of MT has regarded “**mixed MT**” workflows
- **Raw output** consumed by lay users is comparatively more recent
  - ...rise of Web and personal devices
  - stronger MT capabilities and language coverage
  - multilingual demands

---

# Usability

*Align with Users*

We optimize what we measure—but generic performance scores miss usability in achieving goals.

---

---

# Trust

*Calibrate Reliance*

Fluency can mask critical errors—transparency and uncertainty can help calibrate appropriate trust.

---

---

# Literacy

*Empower Users*

MT is a two-way interaction—literacy equips users to be agentic and with critical engagement.

---

# A call to Action

- Design with users in mind and for utility
- Surface uncertainty and transparency
- Foster user agency
- Bridge disciplines

*Curated literature on human-centered MT*

# *Translation in the hands of many: Centering Lay Users in Machine Translation Interactions*

## Thanks for your attention!
